Everytime you sell a coax or mid-range speaker or subwoofer for car, truck, marine or home...

YOU: **Put it in their hands.**

- Say: "How much music do you want to hear from your speaker?"
- They will certainly answer, "all of it." Then state: **"It makes every speaker sound incredibly better."**

Here's how Wave Breaker does that:

- Speaker sound waves travel in two directions: out the FRONT is called "music." Out the BACK is called "noise."
- Wave Breaker is a synthetic cellular rubber that breaks up the back waves.
- By breaking up the back waves before they reflect off of the solid surface, they do not bounce back and take the speaker out of phase.

**It makes every speaker sound incredibly better!**

## Features/Technical

- A synthetic cell foam placed directly behind the speaker magnet will eliminate standing wave/back wave from that speaker.
- Place in subwoofer enclosures directly behind magnet.
- Use in all speaker installations in cars, trucks, RVs, buses, boats and home.

## Installation

- No acetone or alcohol surface preparation.
- No heat guns or messy glue to apply.
- Simply cut with scissors, peel and stick.
- Installation guide in the box and at [hushmat.com](http://hushmat.com).
- Adhesion guaranteed!

**HushMat is the #1 Rated Automotive Sound Deadening and Thermal Insulation Material on the market! AND all HushMat products have been made in the USA for over 25 years!**

**This stuff works! It makes an incredible difference in the sound, ride and comfort of your vehicle.**
